## Maintenance

We strongly recommend performing hardware maintenance at least once a year or more depending on need. Regular cleaning and lubrication of these items will prolong component life and keep them working properly.

### Cleaning

For optimal corrosion resistance, always keep the surfaces clean. This can be achieved by wiping them with a damp clean cloth using either a very mild detergent or soap, then rinsing with warm, clean water to avoid soap residue build-up and drying with a soft cloth.

Do NOT use abrasive, chemical, acidic or citrus-based cleaners, gasoline, wire brushes, scrubbers, and wire wool. They can permanently alter or damage surfaces or hardware finishes.

### Lubrication

Because of their sealing properties, petroleum-based lubricant sprays (e.g., WD-40 ) are highly recommended for lubricating functioning hardware.

### LIFETIME WARRANTY

\*\*Our products are warranted against all manufacturing defects and malfunctions of the material used during fabrication.

\*\* Failure to ensure proper maintenance in accordance with the above instructions will invalidate the replacement warranty. Does not cover normal wear and tear, discoloration, rust, or any other alteration of the finishes. This warranty will not be honored if the product is not used or maintained properly or if it has been modified or improperly installed.
